Rubber Made From Beans.

It has taken the Germans to use beans for making rubber. The process has just been patented. It consists in extracting a thick oil from the soya bean, treating this with nitric acid, and then heating the material to a given temperature, whereupon it becomes viscid and tough like crude rubber. It can then be vulcanized by the addition of sulphur the same as vegetable rubber, and used for the same purposes.

Use of Attar of Roses.

More than \$50,000 worth of attar of roses is brought into this country every year. The best is from roses grown near Constantinople. Not only does this bring a higher price than the product of the Bulgarian rose fields, but its superiority is recognized by a separate classification in the trade. Where does the \$50,000 worth of this oily perfume go? Some of it as "base" for other perfumes, and some of it where few suspect—to the manufacturers of smoking and chewing tobacco.
